

Junior Software Engineer (m/f) – Full Stack

As part of our team in Munich, you and your team-mates are responsible for the XING Events Market (<https://www.xing.com/events>), the best way to find business events in the DACH region. Within this excellent SCRUM team, you will play an active part in shaping our product.

A challenging task

You will implement new features for the XING platform with good test coverage. We do not work alone, but we collaborate with other development teams at XING, connecting our apps using REST and AMQP. We are all full-stack developers, and as part of the team you will build complete features from end to end. As a Junior Software Engineer you will be coached by more experienced developers to properly learn our craft. The events market is built on a Ruby on Rails backend, using MySQL, Redis, Memcache, and Elasticsearch. In the frontend, we use React in the newer parts, and jQuery in the older ones. The team also has developers working on the XING iOS and Android apps, and part of the job is to work together with them on new features, and provide them with the right API calls. At XING, we use Github Enterprise to manage our code base. We heavily use open source projects, and contribute back regularly (see also <https://github.com/xing>). The team's working language is English.

A convincing background

- You have just finished, or are about to finish your computer science education, or something similar.
- Practical experience, e.g. as a working student, or while participating in an open source project, is a big plus.
- Good understanding of algorithms, data structures and general software development patterns, especially OOP.
- Basic understanding of the web technology stack, including HTTP, HTML, CSS, and JavaScript.
- Having worked with Ruby on Rails before is nice, but it is not mandatory. What is mandatory is a willingness to learn new stuff when necessary. Recently for us this was e.g. GraphQL, Docker, Mobile App test automation, and React.
- Good understanding of database technologies.
- You are willing to build software not just for the love of technology, but for the benefit of our users.
- Fluent communication in English.

An inspiring environment

XING Events offers a dynamic environment located in the center of Munich with an excellent rooftop terrace. As well as flexible working hours that support your work-life balance, you'll have an opportunity to unleash your skills and acquire new ones. We do regular team and offsite events, and we send you to conferences, such as the Full-stack Fest in Barcelona. Furthermore, you have the option to work on whatever you like once per quarter during our XING-wide Hack Week. Of course, we also provide free drinks and fruit as well as restaurant vouchers. And let's not forget the smartphone or iPad that you can use privately. You'll also be provided with a high-end MacBook Pro.

Who we are

XING Events is a XING SE subsidiary that currently employs over 75 people and offers professional event organizers an award-winning software for online ticketing and event marketing. We are an innovative, modern and enthusiastic company and our main goal is to create memorable events in cooperation with our customers. Always keeping our vision "For people moments that matters" in mind.

Sounds brilliant and we have awakened your interest? Then, we would be delighted to receive an informative application (including cover letter, CV, salary expectations and links to portfolio and/or other references).
